Haiti Needs Assessment: Survey Analysis

By MapAction, last updated 2021-08-26

This page is a work in progress. Only a subset of the survey data has been summarized.

Summary

This page provides an overview of an initial rapid needs assessment of affected populations in Haiti. This survey contains responses from 307 affected stakeholders, surveyed between August 18th - August 24th, 2021. Responses provide an overview of sectoral needs at the household level.

Basic respondent information

Surveyed respondents are located in either rural, urban, or IDP camp locations. The majority of respondents are in rural locations, followed by urban locations, and with 2 in IDP camps.

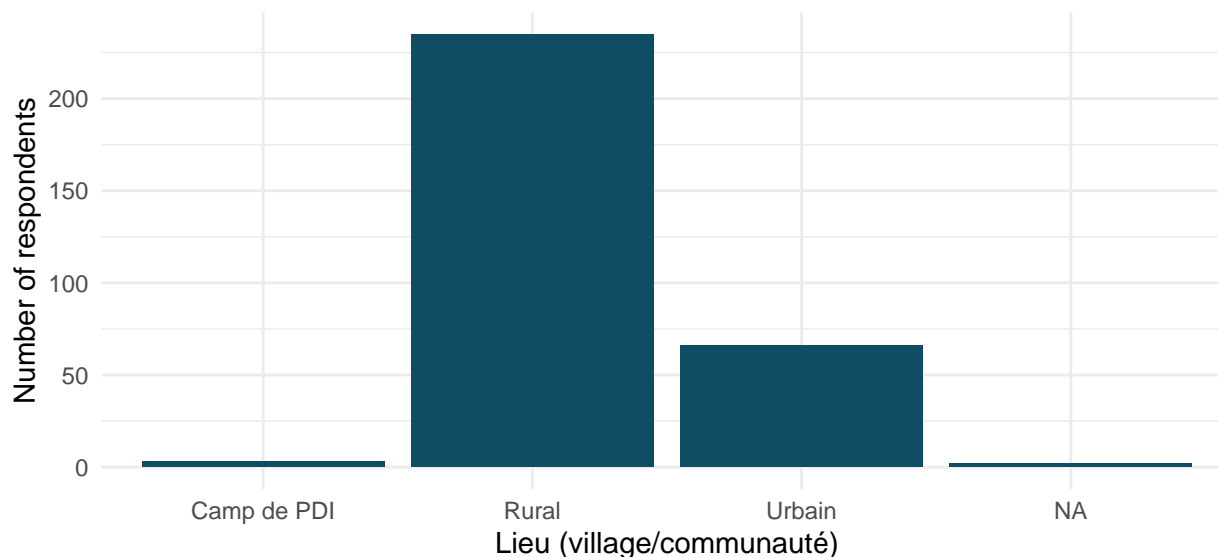

Figure 1: Location of survey respondents

Looking at the proportion broken down by age and sex, we see that the respondent demographics are roughly evenly divided. However, there's a notable proportion of respondents aged 55 or greater located in urban locations.

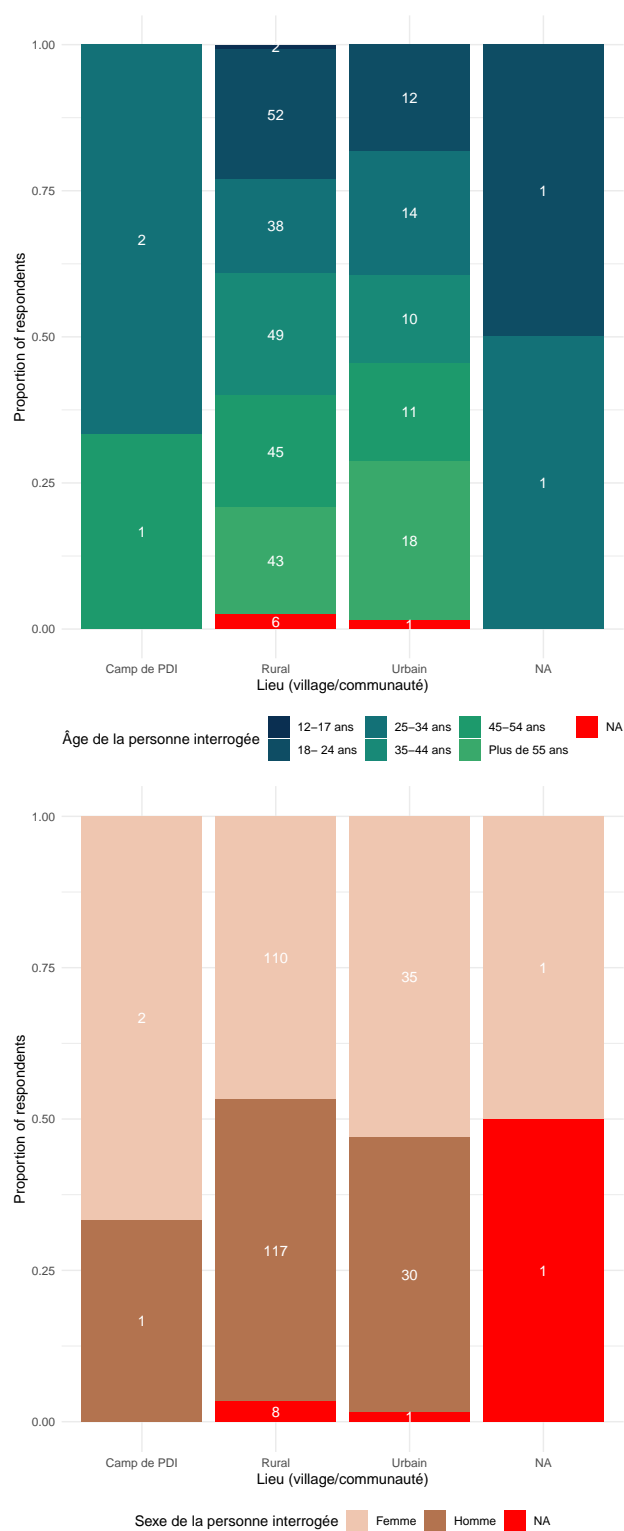

Figure 2: Location of survey respondents, broken down by age (left) and sex (right).

Top priorities

Most respondents are most in need of housing; food; and water, hygiene, and sanitation.
